

Good morning 2nd period –

I have an appointment this morning so I'm not able to be in class. Mr. Albertazzi, one of the 8th grade science teachers, will be covering the class today. I've told him how great you are and I'm sure the period will go well.

Today you will be learning about solving inequalities. It is very much like solving equations, except the answer is a range of numbers instead of one specific number. Please go through the lesson with your partner, solve the Got It! Problems together, and then work on the home practice.

Have a great day and I will see you tomorrow.
