

Lesson plan notes for Accelerated Math 7 on Tuesday, November 28

These are the notes I have left for the guest teacher:

Periods 1 and 3

Today students will be studying for the Chapter 3 retest.

1. Many students need to use the re-teaching resources I have linked in today's Accelerated Math 7 agenda. Some students did well on the test and can choose to act as tutors or can work on Dreambox or other work of their choice. I have left a list for each class of which students need to focus on the retest. **If someone on the list (these are all the students who scored below 80% on the test) tells you that they do not plan to study for the re-test, they need to send an email to both their parents and me explaining why they are choosing not to study for the re-test.**
2. Students who are studying for the retest may work with a partner of their choice as long as they do not disturb the learning of others.
3. Students should use their spirals for the re-teaching practice work and check their answers using the linked answer key.
4. If students finish their re-test practice they can work on Dreambox lessons or work for another class.
