# **Lesson 5** Percent of Change

A percent of change is a ratio that compares the change in quantity to the original amount. If the original quantity is increased, it is a percent of increase. If the original quantity is decreased, it is a percent of decrease.

### Example 1

Last year, 2,376 people attended the rodeo. This year, attendance was 2,950. What was the percent of change in attendance to the nearest whole percent?

Since this year's attendance is greater than last year's attendance, this is a percent of (SUBSTRACT)

The amount of change is 2,950 - 2,376 or 574.

$$\begin{aligned} \text{percent of change} &= \frac{\text{amount of increase}}{\text{original amount}} \\ &= \frac{574}{2,376} & \text{Substitution} \\ &\approx 0.24 \text{ or } 24\% & \text{Simplify.} \end{aligned}$$

The percent of increase is about 24%.

### Example 2

2) DIVIDE THE DIFFERENCE BY

THE STARTING AMOUNT.

574 = 24.1 = 249. Che's grade on the first math exam was 94. His grade on the second math exam was 86. What was the percent of change in Che's grade to the nearest whole percent?

Since the second grade is less than the first grade, this is a percent of decrease. The amount of change is 94 - 86 or 8.

percent of change = 
$$\frac{\text{amount of decrease}}{\text{original amount}}$$
  
=  $\frac{8}{94}$   
 $\approx 0.09 \text{ or } 9\%$ 

The percent of decrease is 9%.

2950-2376=574

#### **Exercises**

Find each percent of change. Round to the nearest whole percent if necessary. State whether the percent of change is an increase or decrease.

3. original: 15

$$0.3 - 4 = 1$$

$$0.3 - 1.0 = 0.3$$

$$0.3 = 0.3$$

$$0.3 = 0.3$$

$$0.3 = 0.3$$
