

## Hands-On Activity 2

Solve  $x - 3 = -2$  using algebra tiles.

$$x + (-3) = -2$$

Remember a 1-tile and  $-1$  tile combine to make a zero pair. You can add or subtract zero pairs from either side of an equation without changing its value.

**Step 1** Model the equation.

**Step 2** Add three 1-tiles to the left side of the mat and \_\_\_\_\_ 1-tiles to the right side of the mat to form zero pairs on each side of the mat.

**Step 3** Remove all of the zero pairs from each side. There is \_\_\_\_\_ 1-tile on the right side of the mat.

Therefore,  $x = \square$ .

Check  $\square - 3 = -2 \checkmark$

**CANCEL EACH OTHER OUT**  
**ZERO PAIR**

$$\begin{array}{l} \cancel{x + (-3)} = -2 \\ \phantom{\cancel{x + (-3)}} + 3 \phantom{=} + 3 \\ \hline x = 1 \\ \phantom{x = 1} \\ 1 + (-3) = -2 \\ \phantom{1 + (-3) = -2} \downarrow \end{array}$$

## Investigate

**CCSS Use Math Tools** Work with a partner to solve each equation. Use algebra tiles. Show your work using drawings.

5.  $x + 4 = 4$        $x = 0$       6.  $-2 = x + 1$        $x = \underline{\hspace{2cm}}$

7.  $x - 1 = -3$        $x = \underline{\hspace{2cm}}$       8.  $4 = x - 2$        $x = \underline{\hspace{2cm}}$

## Analyze and Reflect

Work with a partner to complete the table. The first one is done for you.

	Equation	Related Equation
	$x + 3 = 4$	$x = 4 - 3$
9.	$6 + x = 10$	
10.	$x + 3 = -1$	
11.	$6 + x = -7$	

## Create

12. **CCSS Construct an Argument** Write a rule that you can use to solve addition equations without using models or a drawing.

---

---

13. **Inquiry** HOW can bar diagrams or algebra tiles help you solve an equation?
